

## Embedded operating system and software for self-service kiosks and digital signage

# Self-service kiosks problems

- Expensive license for the operating system
- Requirement to buy an antivirus software
- Extended OS and software installation
- Manual setting of drivers devices
- Software different assembling application for issues solutions

# We have a full software package

The logo for FastSYS, featuring the word "Fast" in a blue, italicized font and "SYS" in an orange, bold font.

## Embedded OS FastSYS

OS operates on any flash-devices, has 5 degrees of crypto protection, with no one crash for 12 years. OS FastSYS reduces service expenses by half and increases the useful life of self-ordering kiosks due to stability and high level of automation.

The logo for ALLVEND, featuring the letters "AV" in a large, blue, stylized font with a white kiosk icon integrated into the "V". Below it, the word "ALLVEND" is written in a yellow and black font.

## Universal Software ALLVEND

Software ALLVEND allows to organize customer self-service in any existing market areas. Its flexibility and simplicity provides with the possibility to customize any self-service points to the business style in the shortest time.

The logo for SKY SEND, featuring the word "SKY" in a black, bold font and "SEND" in a larger, black, bold font. Below "SEND" is the text "SYSTEM OF PAYMENTS". A blue curved line arches over the text.

## Processing complex SkySend

Fault-tolerant cluster complex provides self-service systems with high speed and complete remote kiosks control. The average speed of requests processing is 1.3 seconds, the cluster pair of servers processes over 10,000 operations per second, quickly process customer orders.

# Industries using complex software solution

Payment terminals

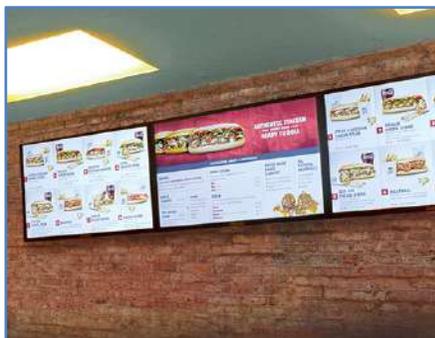

Self-ordering kiosk

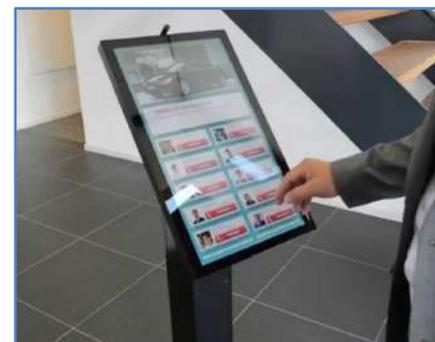

Vending machines

Informational kiosks

Multimedia boards

Reception kiosk

# Payment of orders

Customers can pay for their orders, goods and services in the self-service terminals like in the ordinary cashboxes.

Self-service devices can take both cash and bank cards.

# Customers order themselves

Customers will be able to make checkouts and pay for their orders themselves in the self-service devices.

An application function of product order will increase the speed of customer service, decrease the queues and also reduce the working load in commercial networks.

# Informing and navigation

You can add the information about shops and offices, goods and services, discounts and bonuses, addresses, etc. to the kiosks. Thanks to informing function, the customers will be able to find necessary goods, to order services and to get the answers on concerned questions themselves.

The interactive kiosks application function of informing, permits to reduce the working load in the shops and offices and also to increase the customers confidence.

# Advertising products

- Videos
- Banners
- Printing on receipts

# Customer identification by fingerprint

Self-ordering kiosks provide customers with fingerprint authentication.

This function permits the customers to manage any claim, to order services, to make checkouts, to use stored discounts without any mobile phones or discount cards very quickly and safely.

# New customer services

You can leave the additional services in the terminals, that permit customers to learn information about goods and bonuses of the outlets, to get the answers on concerned questions and to leave the review about quality service to the commercial network managers.

New services will improve the customers loyalty, service and products quality of Hesburger restaurant chain.

# Automatic device installation

To start the self-service devices it is unnecessary to set operating system and the device drivers. Just set the flash storage device into the kiosk, that contains already everything for the software operation. After the flash storage device setting, the software automatically finds and sets all the terminal systems.

Thanks to the universal software application, it takes not more than 15 minutes to set the device.

# The manufacture outlay reduction

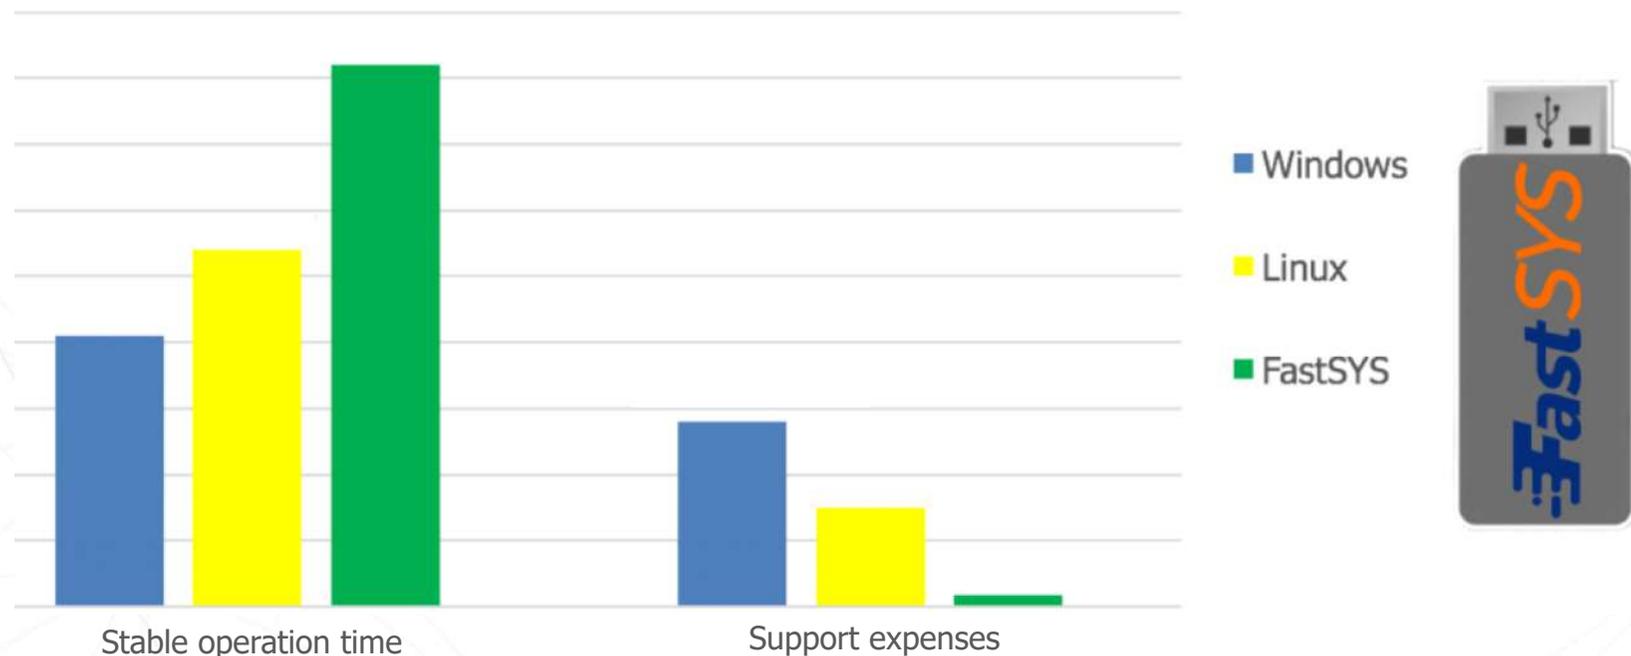

The universal software works from any flash storage device, the operating temperature of which is from -40°C to +60°C, that's why there's no need to set the expensive hard drivers, the heating and cooling system.

Thanks to the applied technology, the programme complex can't be attacked with harmful software, that's why there's no need to buy antivirus programmes to protect the devices.

The application complex of universal software helps to reduce the prime cost production of the self-service devices significantly.

# Our technologies are stable and saving time

The software solution for self-service kiosks runs under the control of the embedded OS FastSYS that contains a wide range of automation for stably operation with no crashing or hanging (automatic elimination of errors in the Internet connection, bill acceptor, printer, automatic debugging of software, etc.)

# Online cabinet for management and statistics

	Turnover control		Logs examination
	Kiosks management		Payments monitoring
	Kiosks monitoring		Interface management
	Financial reports		Advertising Management

Kiosks software settings and setups are made within personal online cabinet.

Any changes in settings and functions of self-ordering kiosks are updated within a few minutes with no need of physical kiosks configuration due to the function of remote control. The cabinet also provides with full self-service kiosks monitoring increasing the control convenience.

## We offer a turnkey solution

- Development of individual solution
- Supply of equipment
- Provision of Software
- Setup and start-up
- Support
